

Gender Pay Gap REPORT 2017

This information has been published in accordance with the Gender Pay Gap Reporting regulations under the Equality Act 2010, Regulations 2017, which came in to effect in April 2017.

The legislation states that UK employers, with 250 or more employees, are required to publish annual statutory calculations showing the pay gap between male and female employees. Gender pay gap is not the same as equal pay.

Equal pay ensures males and females receive the same pay for carrying out the same, or equivalent, work. The gender pay gap looks at the difference between the average male and the average female in the company, regardless of their role.

The data in this report reflects payments made in April 2017 along with any bonus payments made in the 12 months prior to April 2017.

RESULTS

These figures have been generated using the mechanisms set out in the Gender Pay Gap reporting legislation.

Pay Gap between males and females Median: **24.6%**
Mean: **29.2%**

The above figures show the difference between the average hourly pay rate of all females compared to all males at Axiom, irrespective of their role or level within the company. The figures are expressed as a percentage of the male's average pay.

Our figures show that the median average pay of all females is **24.6%** lower than all males within the company. For comparison, the UK's national gender pay gap is **18.1%**.

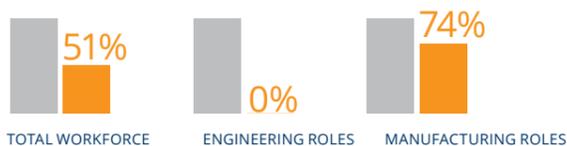

The difference in average pay at Axiom is largely due to more men being in senior, higher paid roles. As detailed below, only **11%** of the management team are female.

Percentage of workforce who received a bonus
Male: **0%** Female: **0%**

Bonus gap between males and females
Median: **0%** Mean: **0%**

The company did not pay a bonus in the 12 months preceding April 2017.

Engineering ROLES

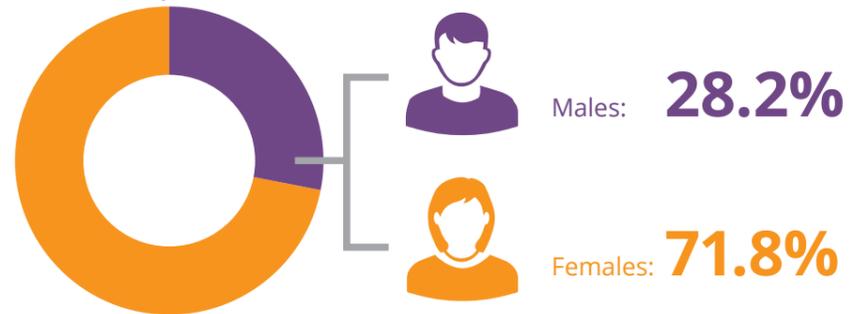

Whilst females represent **51%** of Axiom's total workforce, the gender pay gap is largely attributed to the number of men in engineering roles (**100%**) and the number of women in manufacturing roles (**74%**).

Snapshot as of April 2017

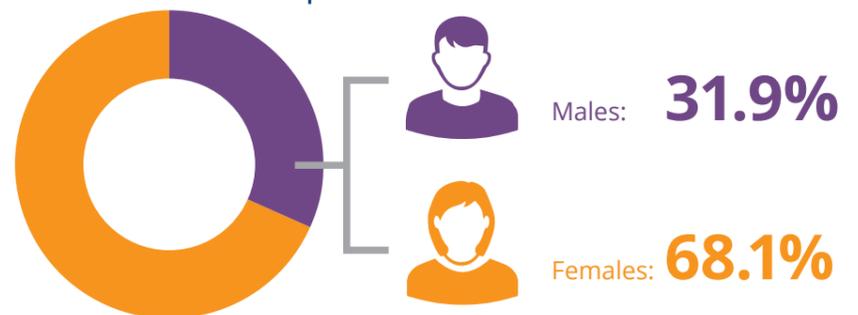

- 51%** of the workforce are female
- 11%** of the management team are female
- 0%** of engineers are female
- 74%** of production operators are female
- 40%** of 2017 new employees were female

PROPORTION of males and females by quartile

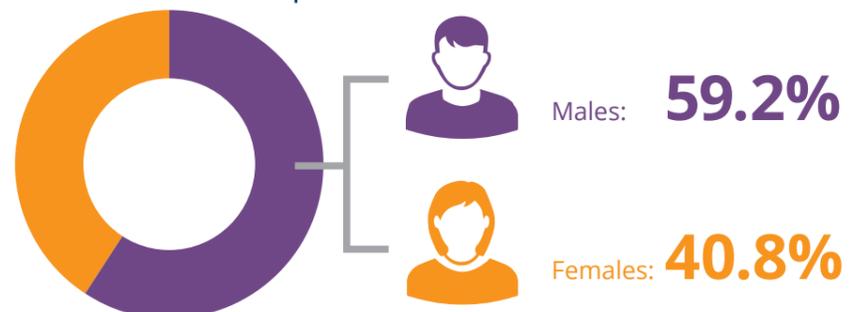

LOWER quartile

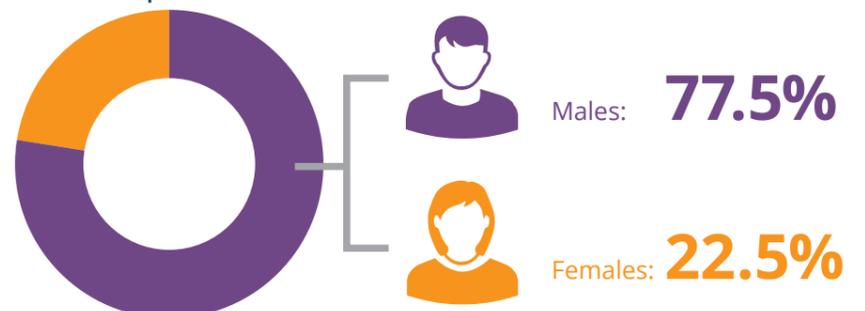

LOWER MIDDLE quartile

UPPER MIDDLE quartile

UPPER quartile

The above figures show the gender distribution across four equally sized hourly pay quartiles.

Since September 2014 Axiom has taken on 9 interns:

5 female
4 male

Since July 2013 Axiom has taken on 11 graduates:

4 female
7 male

Axiom are committed to gender equality and advancing females within the workplace. However, employing females within engineering functions is a challenge across the industry. The company will continue with its apprenticeship, intern and graduate schemes along with flexible working opportunities.

I can confirm the data in this report is accurate and calculated in accordance with legislation.

Signed by D. Davies,
Managing Director.
